Claims

- 1. Substantially pure nucleic acid encoding an IAP
- polypeptide.
- 1 2. The nucleic acid of claim 1, wherein said
- 2 polypeptide comprises a ring zinc finger domain and at least
- 3 one BIR domain.
- 1 3. The nucleic acid of claim 2, wherein said
- 2 polypeptide has at least two BIR domains.
- 1 4. The nucleic acid of claim 3, wherein said
- 2 polypeptide has at least three BIR domains.
- 1 5. The nucleic acid of claim 1, wherein said DNA
- 2 contains the xiap gene.
- 1 6. The nucleic acid of claim 1, wherein said DNA
- 2 contains the hiap2 gene.
- 7. The nucleic acid of claim 1, wherein said DNA
- 2 contains the hiapl gene.
- 1 8. The nucleic acid of claim 1, wherein said
- 2 nucleic acid is genomic DNA.
- 1 9. The nucleic acid of claim 1, wherein said
- 2 nucleic acid is cDNA.
- 1 10. The nucleic acid of claim 1, wherein said
- 2 nucleic acid is mammalian DNA.

- 1 11. The nucleic acid of claim 10, wherein said
- 2 mammalian DNA is human DNA.
- 1 12. The nucleic acid of claim 10, wherein said
- 2 mammalian DNA is murine DNA.
- 1 13. Substantially pure DNA having the sequence of
- 2 Fig. 5, or degenerate variants thereof, and encoding the
- 3 amino acid sequence of Fig. 5.
- 14. Substantially pure DNA having the sequence of
- 2 Fig. 6, or degenerate variants thereof, and encoding the
- 3 amino acid sequence of Fig. 6.
- 1 15. Substantially pure DNA having about 50% or
- 2 greater nucleotide sequence identity to the DNA sequence of
- 3 Fig. 5.
- 1 16. Substantially pure DNA having about 50% or
- 2 greater nucleotide sequence identity to the DNA sequence of
- 3 Fig. 6.
- 1 . 17. A purified DNA sequence substantially identical
- 2 to the DNA sequence shown in Fig. 5.
- 1 18. A purified DNA sequence substantially identical
- 2 to the DNA sequence shown in Fig. 6.
- 1 19. A substantially pure mammalian IAP polypeptide.
- 1 20. The polypeptide of claim 19, wherein said
- 2 polypeptide is the murine HIAP1 polypeptide.

25.

- The polypeptide of claim 19, wherein said 1 polypeptide is the murine HIAP2 polypeptide. 2
- The polypeptide of claim 19, comprising an 22. 1 amino acid sequence substantially identical to an amino acid 2 sequence shown in Fig. 5. 3
- The polypeptide of claim 19, comprising an 1 amino acid sequence substantially identical to an amino acid 2 sequence shown in Fig. 6. 3
- A therapeutic composition comprising as an 1 active ingredient an IAP polypeptide according to claim 19, 2 said active ingredient being formulated in a physiologically acceptable carrier.
- A method of inhibiting apoptosis in a mammal, 1 said method comprising: 2 providing a cell of said mammal with a transgene 3 encoding an IAP polypeptide, said DNA positioned for expression in said cell. 5
- The method of claim 25 wherein said polypeptide 26. 1 is murine HIAP1. 2
- The method of claim 25 wherein said polypeptide 27. 1 is murine HIAP2. 2
- A method of detecting an IAP gene in an animal 28. 1 cell, said method comprising: 2
- contacting the DNA of claim 13 or a portion thereof 3
- greater than about 18 nucleic acids in length with a 4
- preparation of genomic DNA from said animal cell under 5

- 6 hybridization conditions providing detection of DNA
- 7 sequences having about 50% or greater nucleotide sequence
- 8 identity to the sequence of Fig. 5.
- 29. A method of detecting an IAP gene in an animal
- 2 cell, said method comprising:
- 3 contacting the DNA of claim 14 or a portion thereof
- 4 greater than about 18 nucleic acids in length with a
- 5 preparation of genomic DNA from said animal cell under
- 6 hybridization conditions providing detection of DNA
- 7 sequences having about 50% or greater nucleotide sequence
- 8 identity to the sequence of Fig. 6.
- 1 30. A method of producing an IAP polypeptide
- 2 comprising:
- 3 providing a cell transformed with DNA encoding an
- 4 IAP polypeptide positioned for expression in said cell;
- 5 culturing said transformed cell under conditions for
- 6 expressing said DNA; and
- 7 isolating said IAP polypeptide.
- 1 31. The method of claim 30, wherein said IAP 2 polypeptide is murine HIAP1.
- 1 32. The method of claim 30, wherein said IAP 2 polypeptide is murine HIAP2.
- 33. A method of identifying a compound which
 modulates apoptosis, said method comprising (a) providing a
- 3 cell expressing an IAP polypeptide; and (b) contracting said
- 4 cell with a candidate compound and monitoring the expression
- 5 of an IAP gene, an alteration in the level of expression of

- 6 said gene indicating the presence of a compound which
- 7 modulates apoptosis.
- 1 34. The method of claim 33, wherein said IAP gene
- 2 is murine HIAP1.
- 1 35. The method of claim 33, wherein said IAP gene
- 2 is murine HIAP2.
- 1 36. A method for detecting a protein that interacts
- 2 with an IAP polypeptide comprising the steps of:
- 3 a. contacting under suitable conditions an IAP
- 4 protein with a compound suspected to be a modulator of
- 5 apoptosis; and
- b. detecting the interaction of said compound with
- 7 said IAP polypeptide, wherein said interaction indicates
- 8 that said compound is involved in the modulation of
- 9 apoptosis.
- 1 37. The method of claim 36, wherein said IAP
- 2 polypeptide is HIAP1.
- 1 38. The method of claim 36, wherein said IAP
- 2 polypeptide is HIAP2.
- 1 39. The method of claim 36, wherein said IAP
- 2 polypeptide is XIAP.
- 1 40. The method of claim 36, wherein said
- 2 interaction is detected by measuring the transcriptional
- 3 activity of a reporter gene.

- 1 42. The method of claim 36, wherein said compound 2 is a polypeptide.
- 1 43. The method of claim 42, wherein said 2 polypeptide is expressed from a recombinant nucleic acid.
- 1 44. A method of diagnosing an increased liklihood 2 of a cell proliferative disease in a patient, said method 3 comprising detecting the level of IAP gene expression in 4 said patient.
- 45. A method of diagnosing an increased liklihood of a cell proliferative disease in a patient, said method comprising detecting the level of IAP polypeptide activity in said patient.
- 1 46. A transgenic rodent having a knockout mutation 2 in an IAP gene.
- 1 47. A transgenic rodent, said rodent having 2 additional copies of IAP nucleic acids added to its genome.
